Developer cv example pdf

Software developer cv example pdf. Uk software developer cv example. How to write a developer cv. Developer cv summary. Developer cv example.

We don't mean to state the obvious, but companies are flocking to hire web developers. The Bureau of Labor Statistics says that demand for these roles will grow by 28 percent over the next eight years (significantly faster than average).The demand for these roles (and the great salaries) leaves no question about why people pursue web development careers. Not to mention, developers get to solve really cool problems. Who wouldn't want to do that?However, with all candidates applying for web developer jobs, how can you demonstrate your technical prowess while highlighting your ability to make a meaningful impact? Frankly, it's not easy.We've had the distinct pleasure (and, at times, pain) of working directly with hiring managers at companies like Microsoft, Stripe, and Chegg to understand what they're looking for in web developers. Furthermore, we want to pass along that knowledge to you so you're no longer in the dark about the hiring process.In short, here's what you need to do to maximize your chances of getting a first-round interview:Your technical skills need to be written such that they get you past the automated resume filters companies deploy AND satisfy the technical hiring manager who will review your resume.Your resume format needs to be right. This is not the place to get creative with images and graphics. Keep it to one page, make it easy to read, and you'll be fine.Quantify the impact of your work and projects. Numbers speak louder than words, and that especially rings true on a resume.Customize your resume for each job you apply to.We know that writing a resume is just about as much fun as moving or going to the dentist. Our goal with BeamJobs is to simplify this process so you can focus on what you love doing, building web applications.The primary function of the skills section of your resume is to help you get past the automated keyword filters, known as Applicant Tracking Systems (ATS). These systems scan resumes to help hiring managers cut down on time. While they're useful, they can also weed you out if you're not careful.As a web developer, you probably thought that the way to optimize your resume is by including as many keywords as possible. Unfortunately, the technical hiring manager will also review your resume, and a host of keywords isn't appealing to read.Nothing is a bigger red flag to someone who hires web developers than a candidate who claims to know 11 different programming languages and 23 different frameworks. As a rule of thumb, if you won't do well on a whiteboarding session for a given language, don't include it on your resume.You don't want to burn bridges when applying for jobs.

Andrew Nathan

SENIOR ANDROID ENGINEER

Summary

A fast-learning developer pursuing a challenging position at an exciting company to leverage my skills and experience. A self-motivated achiever with an ability to plan and execute. I'm very passionate about learning new technologies.

Experience

Senior Android Developer

HPLC Technologies Oct 2019 - Present

- Design and Build great Android frontends that consume GraphQL and REST APIs .
- Participate great quality code .
- Ensure the performance, quality, and responsiveness of the apps .
- Respect and enforce coding standards and best practices to maintain zero technical debt and 100% test coverage .
- Collaborate with a cross-functioning and self-organizing team to design and ship apps iteratively in an Agile environment .
- Follow the patterns of Test Driven Development and continuous delivery .
- Continuously discover, evaluate, and implement new technologies to maximize development efficiency .

Senior Android Developer

Infosys Technologies Aug 2018 - Oct 2019

- Design and build advanced applications for the Android platform .
- Collaborate with cross-functional teams to define, design, and ship new features .
- Work with outside data sources and APIs .
- Work on bug fixing and improving application performance.
- Implement new technologies to increase development efficiency.

Mid-level Android Developer

Encore Solutions Feb 2017 - Sep 2017

- Deal with different mobile screen sizes .
- Work with third-party libraries and APIs .
- Offline storage, threading, offline database and performance tuning .
- Understand business requirements and translate them into technical requirements .
- Attend meetings with Project Manager .
- Unit-test code for robustness, including edge cases, usability, and general reliability .
- Work with development team to accomplish the client's

Education

The only surefire way to burn a bridge is to outright lie about your qualifications. It's just not worth it. With programming, there just isn't much room to "fake it 'till you make it."For web developers specifically, it's much more important to show a depth of understanding in a few languages and frameworks than it is to show breadth in a whole bunch of different things.It seems like a new JavaScript framework comes out every week, and you would not be expected to be an expert in the flavor of the week by any reasonable employer.Technical skills for your web developer resumeProgramming languages: HTML/CSS, JavaScript, PHP, Ruby, Java, PythonFrameworks: JavaScript (NodeJS), ReactJS, Angular, jQuery), Ruby (Ruby on Rails), Python (Django)Databases: SQL (MySQL, PostgreSQL, SQL Server, SQLite)Cloud infrastructure: AWS, Google Cloud, Azure, Heroku, DigitalOceanUtilities: Git, UnixAgain, you're not expected to have all of these on your resume. In fact, including all of these skills would reflect poorly on your candidacy.

Web Developer Resume

John Michael

31453 Western Ave, Union City, California, USA

Home: 001-123-456789, Personal: 001-210-9876543, email@example.com

Objective

A position as a web developer utilizing my computer knowledge, organizational abilities, strong people skills, and business experience to gain more and more business.

Summary of Qualifications

Working as a web developer in two companies, served the company in many ways using my computer skills. Designed new websites of the organizations and also upgraded the old website to provide latest company profile to the clients. Handled many web developing activities and gained more and more knowledge on web development. Introduced new ways of working which enhanced efficiency of the organization.

Communicated with the clients to understand their requirements, and the services online and performed all other duties as per requirements.

Employment History

Web Developers Inc, California, USA

2005 to Present

Web developer

- Working from 2005 in this organization as a web developer and have gained more and more knowledge about web development and company functions.
- Handled the development of web application software
- Prepared reports on work done on weekly and monthly basis
- Coordinated with other experts in fulfilling client's demands
- Worked on different projects and completed these projects before deadlines
- Performed online business for web designing projects
- Provided training to the new web developers regarding the company's requirements and software used
- Downsized defective and consistent technical support
- Assisted in establishing a successful structure for a growing company
- Designed and created information systems
- Handled working, goal-oriented, performance, and a team player

Education

University of California, California, United States

2003

Masters in Computer Science

Skills

Oral Communication

Leadership

What developer knows every single of these things well enough to be tested on them?The skills you include on your resume are also a function of the kind of roles you're applying to. For example, if you're applying for a front-end web developer role, then your Rails experience likely won't be as relevant.Don't mention your soft skills in your skills section! Companies are not automatically filtering for soft skill keywords, and it's not convincing to the hiring manager to see you have "communication" as a skill. What does that mean without context?There are a few ways you can structure how you talk about your skills on your resume.By proficiency or years of experienceAdvanced: Python (Django), Java, Unix, GitFamiliar: JavaScript, SQL, HTML/CSSBy skill typeLanguages: Python, JavaScript, HTML5/CSS3Tools: jQuery, ReactJSTools: jQuery, Unix, Git, SeleniumDatabases: SQL (PostgreSQL, MySQL), AWSIf you're an entry-level web developer, we recommend you use the "proficiency" skill breakdown because you won't have a lot of work projects to demonstrate your proficiency in the skills you have. The formatting of your resume is pretty straightforward. The goal: keep it simple, and keep it easy to read. Here are the things you need to do to properly format your web developer resume.Keep it to one page. It's hard, but this is absolutely what you should aim for. If you brain dump on a resume outline, you can make that document as long as you please.In your resume header, list your current city (you don't need your specific address).Under your name, include the title of the role you want. So if you're applying for a senior web developer job, make that your title.Most likely, you do not need a resume objective or summary.

MARC BLAMIRE

City, State - 000-000-0000 - info@marcblamire.com

Software Developer

Summary

A highly focused software developer with a master's degree in computer science and possessing strong command in a variety of development and engineering positions. I am open to suggestions, improvements, and opportunities. Can quickly adapt to changing environments and circumstances.

Work Experience

2018-01 - Present

Software Engineer

Microsoft Corp.

Duties/Responsibilities

- Drive using operations to communicate with the server for RESTful APIs
- Design and build automation tools to support internal business units
- Assist back-end developers and front-end users
- Develop an internal application for an enterprise to complete asset surveys in remote locations with local geosensors and a sync upload functionality to a back-end RESTful web service
- Develop in-house reusable libraries for future related projects

2017-01 - 2017-12

Android Developer

Oracle Corp.

Duties/Responsibilities

- Design and build applications for the Android platform
- Developed a custom Oracle Transform Load service to integrate a customer's Oracle contact center system with a cloud-based analytics and reporting system
- Engaged in a full software development process
- Design a source control and release workflow for Android applications

2016-11 - 2016-11

Android Developer

Adobe Inc.

Duties/Responsibilities

- Install and configure computer hardware, software, systems, networks, printers, and scanners
- Install and configure third-party and internal application performance
- Real-time Telecommunication Administration, Configuration, and Support, including IP IT'S Services, Lync, Skype, PBX, and other voice features

Unless you're an entry-level or senior candidate, omit this section.If you're entry-level, include relevant classes you took in school that make you a good fit for the web developer job you're applying to.Include any relevant demonstrations of your ability as a developer. Adding links like your GitHub profile or your personal portfolio site can encourage hiring managers to look you up and see your skills.Do not have any typos or grammar errors on your resume!Most of these tips are self-explanatory, but we'll elaborate on a few just to make sure the points are clear.To keep you on your toes, let's talk about the last bullet point first. For any given web developer role (and this goes double for junior web developer roles), the hiring manager is reviewing, on average, over 60 resumes.This means they're essentially looking for a reason to say "no" to a given person instead of "yes" because they only have so much time to dedicate to resume review. Don't let a silly grammar error or spelling mistake be the reason you get put in the "no" pile. Read your resume, then read it again. Then read it five more times. Then send it to your mom/friend/brother/cousin/colleague/whomever to make sure another human catches basic mistakes that a machine can't catch.Education for an entry-level web developer vs. an experienced web developerYou want to try to keep your resume to one page. We know that's a tough pill to swallow since you want to include all your qualifications to help you get the job.Sadly, hiring managers are busy, and they can't spend as much time as they'd like reviewing all resumes they get for a given role. For that reason, your resume needs to be a one-page highlight reel.Once you get an interview, you can spend more time expounding on your past experience and skills. Until then, keep your resume short. You're more than your one-page resume, but you can't overwhelm hiring managers at the start.That one page of information will likely differ between candidates with more or less experience. A senior-level developer can't afford to waste much space on their education section. Conversely, an entry-level web developer needs to convince the hiring manager they have the right skills and knowledge, so they might include relevant courses and their GPA.Entry-level vs. experienced web developer education on resumeEntry-level web developersInclude all relevant programming or math classes you took in school to highlight your qualifications.Include your GPA if it's above ~3.2If you just finished a software engineering boot camp, include it in your education sectionSenior web developersDon't waste space on classes you took in school. Use this to focus on the projects you worked on in your jobs.Don't include your GPA. It will have very little sway after you already have a few years of experience under your belt.Consider a resume summary, but only if you're going to take the time to do it right (see our notes about the objective below). Most resume objectives we've seen from web developers should never be included in their resumes. What makes them so bad?Picture this: you're reading a resume, and the very first line says "I am a hard-working web developer looking to grow my skills." It's not terrible, but it's not great. Would you hire someone based on that line?Probably not.A resume objective should be a two-to-three-sentence sales pitch explaining your experience, skills, and passion for the job. Most of the time, you don't even need to include it!There are two cases where it's best to a resume objective.You're undergoing a career changeYou have a particular interest or passion in the company or role you're applying toIf you're not customizing your objective for each job you're applying to, then you're better off not including a resume objectiveRemember, real estate is valuable on a one-page resume. Don't waste it by saying something that doesn't improve your chances of getting an interview. To illustrate the point, here are a few resume objective examples.WRONG - this resume objective doesn't say anything new or valuableLooking to utilize my skills as a front-end web developer to improve and iterate on the product for a customer-first organization.RIGHT - specific, demonstrated interest in the company missionAs the daughter of small business owners, I'm really excited about the prospect of using my full-stack Python experience to further the Stripe mission of making payments accessible for companies of all sizes across the globe.Numbers speak louder than words. While there is no way to directly quantify the work of a web developer (and no, lines of code written do not count as a metric), you can try to quantify the impact of the projects you've worked on.Whenever possible, include the tangible outcome of your projects. This doesn't always have to mean that you've impacted revenue in some way. Here are some other ways that your work may have had an impact (and this is not all-encompassing, get creative):Ways to quantify the impact of your work as a web developerReduced downtime by X%Improved the speed of the application by X%Implemented a product feature that improved customer retention by X%Improved customer satisfaction (as measured by NPS) by X%Built a feature that improved click-through rate by X%Scaled a product that successfully handled X concurrent usersAutomated a process that saved X hours of manual labor each weekImproved a product feature that increased usage by X%Worked on a project that led to a cost savings of X\$Implemented unit tests that improved test coverage by X%Fixed a bug that reduced customer complaints by X%It's okay if these impacts are rough estimates. As long as you can justify your metrics in an interview setting, go for it! Back-of-the-envelope math is totally acceptable here.When a hiring manager is reviewing your resume, you want to make the case that you deserve an interview no matter where they focus their attention on your resume.

To do that, you need to convince them that you will have a meaningful impact on their business.After all, companies hire developers (and anyone, really) to have an appreciable impact on the business.

What better way to demonstrate you can do this as a developer than showing you’ve had a huge impact in all of your past roles?To hammer this home one more time, consider these two examples. They’re talking about the same work experience, and the only difference is that one candidate made their impact explicit numerically. Who would you hire? WRONG – work experience not tied to outcomesEdTech CompanyJanuary 2015 – Present, New York NYSenior Web Developer When looking to stand out in the job market and attract the best employers, it helps to have a quality CV. So, I’ve put together this step-by-step CV writing guide with 9 downloadable CV template PDF options It also includes plenty of CV examples for inspiration and guidance.

If you follow the advice here, you should easily be able to create an interview-winning CV and start getting the job offers you want. CV template PDF To kick off the guide, take a look at this example of a CV PDF (Created using our CV builder and saved as a PDF) CV template PDF 2 CV template PDF 3 How to format and structure your CV Before you start adding content to your CV, it’s vital to get the format and structure right. Here’s what the format and structure need to do: Make the CV look flawlessly professional Make it easy for recruiters and hiring managers to read and digest the information quickly Here’s an infographic that gives you a quick overview of how to achieve this. CV formatting Stick to the following guidelines when formatting the CV: Use a basic clear font – anything too elaborate will be difficult to read. Break the document up into clearly divisible sections using bold headings and borders. Break text up into bullet points and short sentences to facilitate easy reading. Avoid big chunks of text, they are a reader’s worst nightmare Keep the colour scheme basic, and don’t clutter the page with any images CV structure Your CV needs to be structured in a way that gives recruiters the information they need, in the order they want it. You can always use one our CV templates to get a head start on this. Here is an overview of the sections your CV needs, in the order they should appear. Name and contact details CV profile – An introductory paragraph Work experience – Your previous roles in reverse chronological order Education and qualifications Hobbies and interests – optional Note: You do not need to add references to your CV – employers should only ask for them once they’ve made you a conditional offer. Now. Let’s take a look at each of these sections and how to write them. Name and contact details Head the CV with your name and contact details tucked up into the top right corner of the document. It’s important that your contact details aren’t missed, but you don’t want to take up too much room with them – so keep them brief. You only need to include your name, telephone number, email address, and general location. Don’t add your full address, date of birth, or anything else that is surplus to requirement at this stage of the application – they will waste valuable space. Writing your CV profile To ensure that your CV holds the attention of busy recruiters as they plough through all of the CVs in their inbox, you need a punchy profile to hook them. Your CV profile (or personal statement) is a short simple paragraph that sits at the top of your CV, and summarises your abilities as a candidate. For best results, it should be tailored to match the requirements of your target jobs as much as possible. The information you include in your CV will obviously differ depending on your profession and experience level, but generally speaking you should be giving a round-up of the following: Your industry experience – What types of companies have you worked for and how much industry experience do you have? Your professional skills – Are you sales person with talents in lead generation and relationship building? Or are you a data analyst with skills in reporting and number crunching? Your qualifications – Are you degree educated? Do you have any specialist vocational qualifications? Problems you solve – What is the ultimate benefit of your work? Do you help companies save money? Do you provide support to colleagues and customers? Keep the profile brief to give readers a quick understanding of what you do – save the detail for your work experience. Avoid using too many cliché terms in your profile (such as hardworking team player) They are generic and don’t give recruiters a proper understanding of your skills. Quick tip: If you worry that your spelling and grammar might not be correct, try using our partner’s CV builder to eliminate the risk of making mistakes. Adding your work experience If you are an experienced candidate, the bulk of your CV should consist of your work experience. Your roles should be listed from current to oldest, with lots of detail in recent roles, and less details in dated roles. This is because employers will consider your recent work to be much more important in determining your suitability, and so will want more information about your current/most-recent job. Roles form 5, 10 years ago or longer can be reduced down to 1 line summaries, or even removed if they aren’t relevant. Structuring your roles Your recent roles need to be well structured so that recruiters and hiring managers can skim read them and digest the information they need. Use a structure like the example below to achieve this. Start with an outline to build some quick context for readers, showing them who the employer is, and what the overall goal of your role is. Then bullet point your responsibilities to demonstrate your input into the role, whilst displaying as many important skills and abilities as you can. Round the role off with some notable key achievements to show employers what impact you have made in the role. Bonus tip: Quantify your achievements with facts and figure to prove how valuable your input has been. Listing your education Your education should be listed towards the end of your CV, simply listing your most relevant qualifications. If you are an experienced candidate, you can keep this section short because recruiters will be giving your work experience more attention. If you are a school leaver or graduate with little/no experience, you will need to include more detail on your education to compensate for the lack of workplace skills. On top of your exam grades, it can be helpful to include modules, projects and positions of responsibility taken up within school. If you have a technical role, such as a developer or electrician, you can also add a technical skills section. Should you add hobbies and interests? Hobbies and interests are an optional section which can help you to demonstrate skills gained outside of your work and education. If you’re a junior candidate, or somebody with work-related interests, they can provide a great boost to the CV. Check out my video on CV hobbies which will tell you if you should add hobbies to your CV.. CV template PDF Hopefully this guide and example CV have given you a good idea on how to write your own CV. Above all, remember to create a pleasant reading experience which quickly explains why you are suitable for the roles you are applying to. If you can do this effectively, you will get plenty of responses from your applications, and should be able to land the interviews you need. If you want to get a head start on your CV, download my CV template. Good luck with the job search!
